                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Clone distribution: MGC clone distribution information can be for through the I.M.A.G.E. Consortium/ILML at: http://image.llnl.gov Series: IRAK Plate: 6 Row: c Column: 16
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.

(HUMA-) HUMAN GENOME SCI INC

SM; Ruben ď Rosen

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 28639; 3071pp + Sequence Listing; English.

AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180
that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polymucleotides may be used to produce the secreted (I), by inserting the mucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polymucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.

ing human immune/hematopoietic antigen polypeptides, ng, diagnosing and/or treating cancers and

NO 28638; 3071pp + Sequence Listing; English

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
cypression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). by inserting
polynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic antigen genomic
to AAK87694 represent human immune/haematopoietic antigen genomic

                                                                                                                        0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as
                                                                                                                                                                                                                              61 GITCCGCTCACTCCATGCTGTCTGAGTGCCTGTTCTCGCTCATCAATGGGGACGACAT 120

                                                                                                                                                                                                                                                                                                                                                                704
a food supplement, (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome

Complexities are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving an expension of the sequence and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations or responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and compositic coding sequences of the invention.

Comino acid sequences of the invention.

Comino acid sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymcleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques of restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating of sites expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. PAS64197-PAS94564 represent novel human diagnostic coding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CTGACCTTCTTCCACAACTACAATTTCCGCTCACTCCATGGTGTCTGAGTGCCTGTTC 1519

The invention relates to a novel transient receptor potential (TRP)-like calcium channel, designated TLCC-2 and polynucleotides encoding the TLCC-2. TLCC-2 can be expressed by standard recombinant methodology. The TLCC-2 polypeptide, polynucleotides and modulators are useful for treating central nervous system disorders such as neurodegenerative disorders for example Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, progressive supranuclear palsy, epilepsy, Creutzfeldt-Jakob disease, AIDS-related dementia, familial infantile convulsions, paroxysmal choreoathetosis, psychiatric disorders such as depression, anxiety, schizophrenia, psychoses, mania or phobic disorders, learning or memory disorders such as amnesia, age-related memory loss, or a neurological disorder such as migraine. The molecules are also useful to treat a pain disorder. The present sequence represents the coding sequence of the human TLCC-2 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         58 GCAGITCCGCICACTCTCCAIGGIGITCTGAGTGCCTGTTCTCGCTCATCAATGGGGACGA 117

for treating disorders

```
The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrembolytic activity, cancer diagnosis and therapy, drug screening,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to the protein and coding sequences of human transient receptor potential (TRP)-like calcium channel protein-2 (TLCC-2). The sequences can be used in the treatment of TLCC-2 related disorders, including central nervous system disorders such as Alzheimer's, Parkinson's and Huntington's diseases, multiple sclerosis, Gilles de la Tourette's syndrome, autonomic function disorders, learning or memory disorders, pain disorders and disorders of cellular proliferation, including cancer. The present sequence is the TLCC-2
                                                                                                                                                                                                                                                                                                                           channel

AAF81741 to AAF81777 encode the human membrane associated proteins

(MEMAP) given in AAB74695 to AAB74731. MEMAPs have cytostatic,
antiinflammatory, anticonvulsant, immunosuppressive, antidiarrheic and
antiarteriosclerotic activities, which can be used in gene therapy.

MEMAPs and agonist of MEMAPs can be used to treat a disease or condition
associated with decreased expression of functional MEMAP and antagonists
of MEMAP are used to treat a disease or condition associated with
coverexpression of functional MEMAP. These disorders include cell
coverexpression of functional MEMAP. These disorders include cell
disorders. The MEMAP polynucleotides and proteins are also used for the
disorders. The MEMAP polynucleotides and proteins are also used for the
disorders and be used to screen for compounds which specifically
bind MEMAP including antibodies, oligonucleotides, proteins and small
complecules. MEMAP polynucleotides can be used to prepare transgenic
animals which can be studied to provide information concerning human
disease. Anti-MEMAP antibodies are useful in immunoassays for the
chection of MEMAP protein and can be used as antagonists to treat or
prevent a disorder associated with MEMAP. Polynucleotides encoding MEMAP
can be delivered to target cells with genetic abnormalities with respect
to the expression of MEMAP to treat or prevent a disorder associated 1522 anderrodedecentecadedeceadedeceaceaceadedecenterader 1582 o. 117 TCACTCTCCATGGTGTCTGAGTGCCTGTTCTCGCTCATCAATGGGGACGA reacterecardererereagecererreregereareageage Gaps DB 22; Length 2052; ó Score 142.7,

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB9044) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune charowitis, disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy, and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1463 GAAGTTCCGCTCACTCTCCATGGTGTCTGAGTGCCTGTTCTCGCTCATCATGGGGACGA 1522

The polynucleotide sequences given in AAB19052 to AAA39088 encode the human secreted proteins given in AAB08891 to AAB08984. The human secreted proteins can have activities based on the tissues and cells they are expressed in. Examples of the activities are: cytostatic; anti-proliferative; immunosuppressive; antibacterial; and vulnerary. The secreted proteins and their related polynucleotide sequences are useful for diagnostic and therapeutic methods useful for diagnosing and treating disorders related to the secreted proteins. The proteins, and polynucleotide sequences may be useful for treating disorders of the immune system, hyperproliferative disorders, infectious disease, regeneration of tissues, for chemotaxis and for screening molecules that bind to the proteins. The proteins or polynucleotide sequences may be used as food additives or preservatives, to increase or decrease storage used as food additives or preservatives, to increase or decrease storage

TLCC-2 can be expressed by standard recombinant methodology. The TLCC-2 polypeptide, polynucleotides and modulators are useful for treating central nervous system disorders such as neurodegenerative disorders for example Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, progressive supranuclear palsy, epilepsy, Creutzfeldt-Jakob disease, AIDS-related dementia, familial infantile convulsions, paroxysmal choreoathetosis, psychiatric disorders such as depression, anxiety, schizophrenia, psychoses, mania or phobic
                                                                117
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transient receptor potential like calcium channel; TRP; TLCC-2; human; neuroprotective; analgesic; nootropic; antiparkinsonian; antidepressant; cerebroprotective; anxiolytic; antimanic; anticonvulsant; gene therapy; calcium signaling; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AA171699
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT
```

The present invention relates to the protein and coding sequences of human transient receptor potential (TRP)-like calcium channel protein-2 (TLCC-2). The sequences can be used in the treatment of TLCC-2 related disorders, including central nervous system disorders such as

Novel isolated human transient receptor potential-like calcium channel protein-2 useful for treating Alzheimer's disease, depression, amnesia

Claim 1; Fig 1; 148pp; English.

protein-2 useful for pain disorder, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical
                                                                                                                                                                                                                                       58 GCAGTTCCGCTCACTCCATGGTGTCTGAGTGCCTGTTCTCGCTCATCAATGGGGACGA 117
Alzheimer's, Parkinson's and Huntington's diseases, multiple sclerosis, Gilles de la Tourette's syndrome, autonomic function disorders, learning or memory disorders, pain disorders and disorders of cellular proliferation, including cancer. The present sequence is the TLCC-2 coding sequence including the 3' UTR.
                                                                                                                                                                                                                                                                                                                                                    1556 CATGITIGIGACGITCGCCGCCATGCAGGCGCAGCAGGCCGCAGCAGCCTGGTGGCT

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ۲,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      176
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           474
                                                                                                                                                                                                                                                                                                                                                                     Note: The sequence data for this patent did not form part of the printed specification.

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and useful for preventing, metastasis -

Disclosure; SEQ ID NO 28638; 3071pp + Sequence Listing; English

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome

                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                                                 360
that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                             rascrandacedecrecrecrececececededecreaged

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 28639; 3071pp + Sequence Listing; English

```
AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
broteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
contraction by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
polynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic antigen genomic
concers and cancer metastases of haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK54950 and AAM82169
corpresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           4161

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -AUG-2000
                   AAK67282;
                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The conformal activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human of aganostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                648
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   212
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    708

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
creatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
creatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
creatment the patients own production of (I). Additionally, (I)
couplement the patients own produce the secreted (I), by inserting
the nucleic and bost cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic-derived cells. AAK64703
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK54950 and AAM82169
represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16375
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             16436 AATAACATAGCAAAACCCCATCCCTACTAAAATACAAAATTAGCTGGGCGTGGTGGCA 16495

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human tweety homologue 2 (TTYH2) polypeptide and polynucleotide sequence. TTYH2 is useful for producing an antigen-binding molecule that is immuno-interactive with the polypeptide. The agent is useful for manufacturing a medicament for restoring a normal level and/or functional activity of TTYH2 expression in a patient, and for treating or preventing cancer or tumour. TTYH2 sequences may also be used to provide both drug targets and regulators to promote or inhibit one or more activities, and to provide diagnostic markers for cancers. The present sequence is human TTYH2 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               251 ATTAAAATCAACAGCTGTGGCTGGGCACGGTGGCTCACGCTATAATACCAGCACTTTGG 310
